

Topzout, 2952 BB 59, (NL)
Produced in the Netherlands.
This product conforms the EN973 TYP A Grade.

Calcium and magnesium ions cause hard water. In water softeners these ions are exchanged against sodium ions which results in the water being softer. The ion exchanger in the water softener must be rinsed regularly with a brine solution. Salt tablets produce, without further complications, this brine. They increase the effectiveness and sustainability of your water softener.

PRODUCT DESCRIPTION

The water treatment products of the producer have been specially developed to satisfy the requirements of all types of water softening systems. Salt for water treatment have been developed for industrial and domestic applications. All the salt products of the producer satisfy the most stringent European requirements relating to purity for the treatment of water intended for human consumption.

COMPOSITION as typical Salt type: industrial unsieved salt

Sodium Chloride (NaCl)	99.8 %*
content of sodium	39.0 %
moisture (H2O)	< 0.05 %

* Based on dried pure salt

PARTICLE SIZE DISTRIBUTION

The size of TopZout Salt Tablets has been chosen on the basis of study into applications in the domestic and industrial area.

Round tablets Ø 25 x 17 mm
Grit (crush) < 2 %

The particle size distribution may deviate due to segregation during transport and storage.

DENSITY

1100 kg/m³

DELIVERY UNITS

	PE bag 25 kg x 40
Article number	8018771 Art. nr. TopZout A5
EAN (single unit)	
EAN (colli)	n.a.
Pallet	returnable pallet euro HT 120 x 80 cm
Layers	8
n / layer	5
Gross weight	1,030 kg
Net weight	1,000 kg

All salt products from the producer meet the Standard for Chemicals used for water treatment: "Sodium Chloride for regenerating ion exchangers", NEN-EN 973 type A/B and EN 14805 type 2. All products of the producer are free of gluten, pathogens and allergens, and contain no micro-organisms or traces of shellfish and/or mollusks. All products of the producer are completely free of pesticide residues. All the producers activities are covered by a QHSE (Quality, Health, Safety and Environment) system that is frequently audited.
